
Server and Repository Infrastructure Department

Leader: Mgr. Michal Voců

Scope of work:

The System Administration Department primarily provides:

- the operation of the ICT server rooms in the RCU and Jinonice premises,
- the administration and development of server infrastructure and data storage for services provided by the ICT,
- the administration of virtualization infrastructure,
- the administration of servers at the level of operating systems,
- the administration of servers in the ICT CU domain (servers HANDYMAN, DOLPHIN etc.),
- the administration of servers in the JINONICE domain (servers AJIFS01, AJIMS01, etc.),
- the administration of selected servers for D&R agendas,
- the backup and recovery of data of selected university servers.

At the same time, the department provides the following services:

- the operation of the CAS CU Central Authentication Service (<https://ldap.cuni.cz>) and the identity of the IdP CU provider,
- the provision of LDAP services (user authentication, user information source - relations, cards, contact information),
- the provision of mail services for the CU (incl. backup MX server) and the support of faculty administrators of these services,
- the provision of e-mail and webhosting for the CU workplace without its own servers.
