
uk-visitors

The **uk-visitors** network is intended for the use of visitors of events (conferences, seminars) organised in the following buildings of the Charles University:

- Karolinum (Ovocný trh 3/5 + Celetná 20, Prague 1)

In the mentioned buildings, a WiFi with SSID (network name) uk-visitors is available. Its coverage is coextensive with the coverage of eduroam WiFi.

Accounts for event participants are created based on request by organisers of the event in question. Each participant must have his or her own account (name and password) – collective or anonymous accounts are not supported. The organiser must provide a list of all event participants in an XLS [an empty file [here](#)] or CSV format (values separated by semicolon) at least 3 working days in advance. For each participant, the list must contain in separate columns the person's given name, surname, and home institution. The name of the event, its dates, location, and contact information (email and telephone number) of the organiser must also be provided to enable an efficient resolution of any eventual security incidents. The abovementioned list of participants and other information should be sent as specified and in advance to: admin@visitors.cuni.cz.

Using the DHCP, users are assigned IPv4 addresses in the range of 88.208.126.0/24. Outgoing traffic is not filtered except for the SMTP (25/tcp) protocol and protocols SMB/RPC 135, 137-139, 445 TCP i UDP. The smtp.visitors.cuni.cz can be used as the SMTP server.

After logging into the network, users attempting to access some existing web page are redirected to the login page where they gain access using their assigned name and password.
