New features in Version 4

- A thoroughly reworked user interface:
 - · The possibility of opening several documents at the same time
 - •
 - **Possibility of a two-column view of the node structure** similar to one in Windows Commander. What this enables is a simultaneous depiction of two distinct nodes which makes operations such as node transfer or node copying clearer to visualise
 - · Possibility of displaying, editing, and deleting files which belong to a particular node
 - · An intelligent way of checking the names of files which are downloaded into the system
 - · Possibility of working with the application using keyboard shortcuts
 - <u>New components</u> such as image gallery, displaying of maps, etc. and extension of possibilities of some older components (e.g. Image)
 - · Possibility of changing the sequence of nodes by dragging them by mouse
- A completely **reworked server** and communication with client applications
 - Communication is noticeably faster
 - · Thanks to new architecture, new nodes can be developed more quickly
 - · The server is more stable and numerous serious and less serious faults have been fixed
