
How to connect

How to connect

For connection to the **eduroam** network you will need so caled supplicant. It's a small piece of software, which will authenticate you to the network. Every modern operating system already have one.

You can use the setup guide for your operating system bellow or you can use the [eduroam Configuration Assistant Tool](#) .

- Windows 7 and Vista instructions are available [here](#) .
- Windows 8 instructions are available [here](#) .
- Windows 10 instructions are available [here](#) .
- Android instructions are available [here](#) .
- Apple iPhone instructions are available [here](#) .
- Apple Mac OS X instructions are available [here](#) .
- Instructions for other operation systems are available at the national portal [eduroam.cz](#) .

For security reasons the installation of the root certificate of **DigiCert Assured ID Root CA** is recommended, which is the base of our RADIUS server certificates. In case this root certificate is not available, it is necessary to turn off the server certificate authentication for EAP.

Certificate SHA1 fingerprint: **05:63:B8:63:0D:62:D7:5A:BB:C8:AB:1E:4B:DF:B5:A8:99:B2:4D:43**

Certificate files: [.cer](#) (binary) , [.pem](#) (text) .
